January 22, 2007 - ADC KRONE Launches TrueNet Physical Layer Management Solutions

ADC KRONE a leading provider of communications network infrastructure solutions, today announced its launch of TrueNet® Physical Layer Management (PLM) solutions. Designed to cater the future needs of network managers, TrueNet PLM will reduce the cost of network ownership by solving issues like unplanned downtime, inefficient manual moves, adds and changes, redundant ports, and inaccurate records.

TrueNet PLM combines leading connectivity technology with Intelligent Physical Layer Management providing complete end-to-end, real time control and management of enterprise copper and fiber networks. Supplied through ADC KRONE's fully trained and approved TrueNet integrators, the TrueNet PLM solution comes with the TrueNet warranty. The active hardware is configured in a hierarchical layout and is the interface between the PLM Patch Panels, providing the management software with all relevant data to scan connectivity changes within the physical layer.

“Market growth in structured cabling has impacted the increase in large network deployments and the demand for higher bandwidth, and the TrueNet PLM solutions provide an effective way to address these requirements,” said Dileep Kumar, product manager, structured cabling for ADC KRONE. “TrueNet PLM contains indicators and controllers to identify racks in larger communication rooms and to assist with the work order process or other maintenance operations.”

About the TrueNet Portfolio

The TrueNet Structured Cabling System, a highly reliable, end-to-end system, is designed to meet the unique network infrastructure needs of enterprises, backed by the industry's only true Zero Bit-Error Warranty that guarantees signal integrity and network throughput. Featuring proven cable, connectivity, and cable management solutions for Fiber, 10 Gigabit Ethernet over UTP, and Category 6/5e from the data center to the desktop, TrueNet is installed in high-performance networks worldwide.
